BrightTV Viewership Analytics Dashboard Report

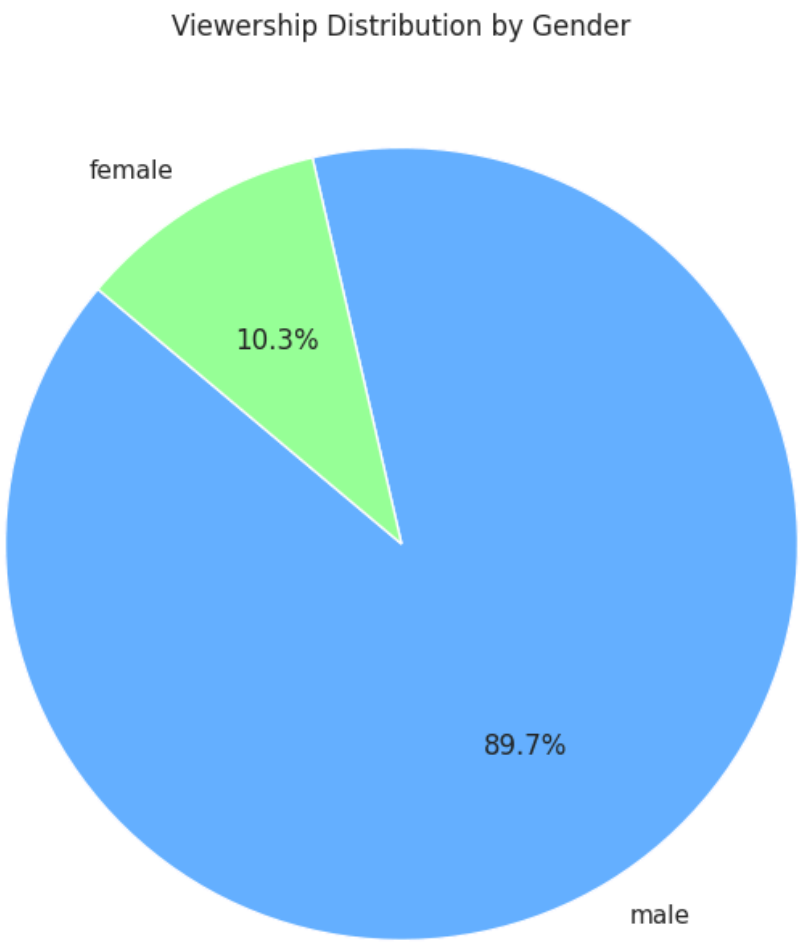
Executive Overview

This dashboard presents a comprehensive analysis of BrightTV's viewership data from January to March 2016. The insights derived from this analysis are intended to support the CEO's objective of growing the company's subscription base and understanding the factors influencing viewer consumption.

1. Demographic Insights

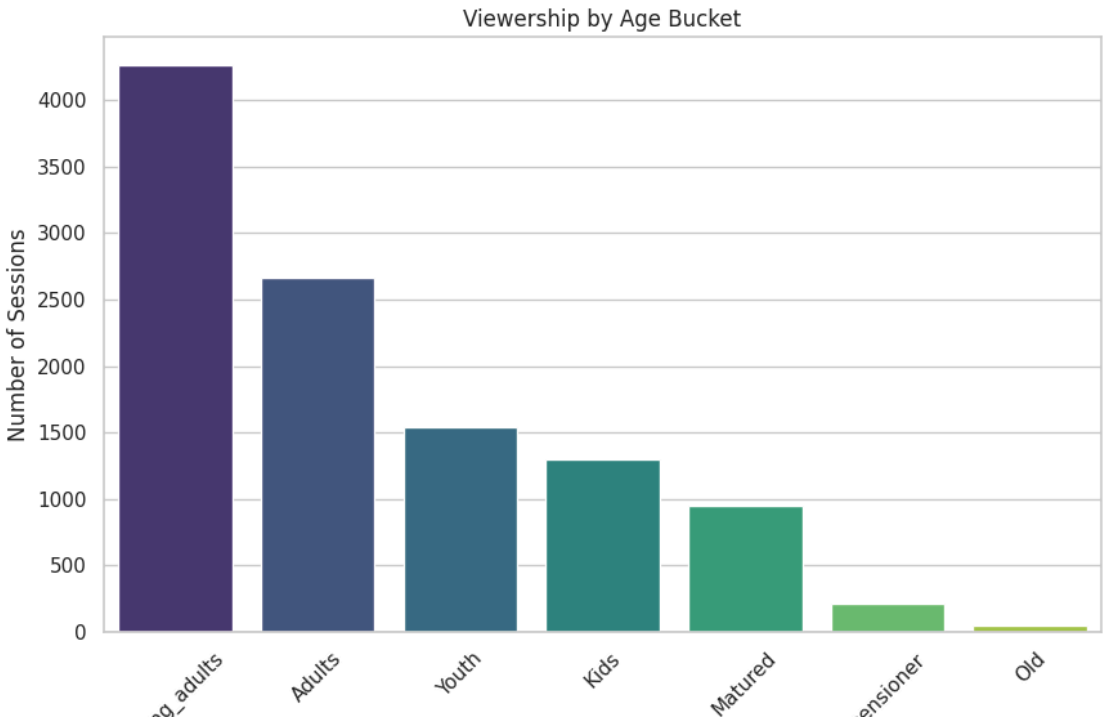
The demographic analysis reveals the composition of BrightTV's audience by gender and age.

Viewership by Gender



The viewership is fairly balanced across genders, with a significant presence of both male and female viewers. Understanding these segments allows for targeted content strategies.

Viewership by Age Bucket

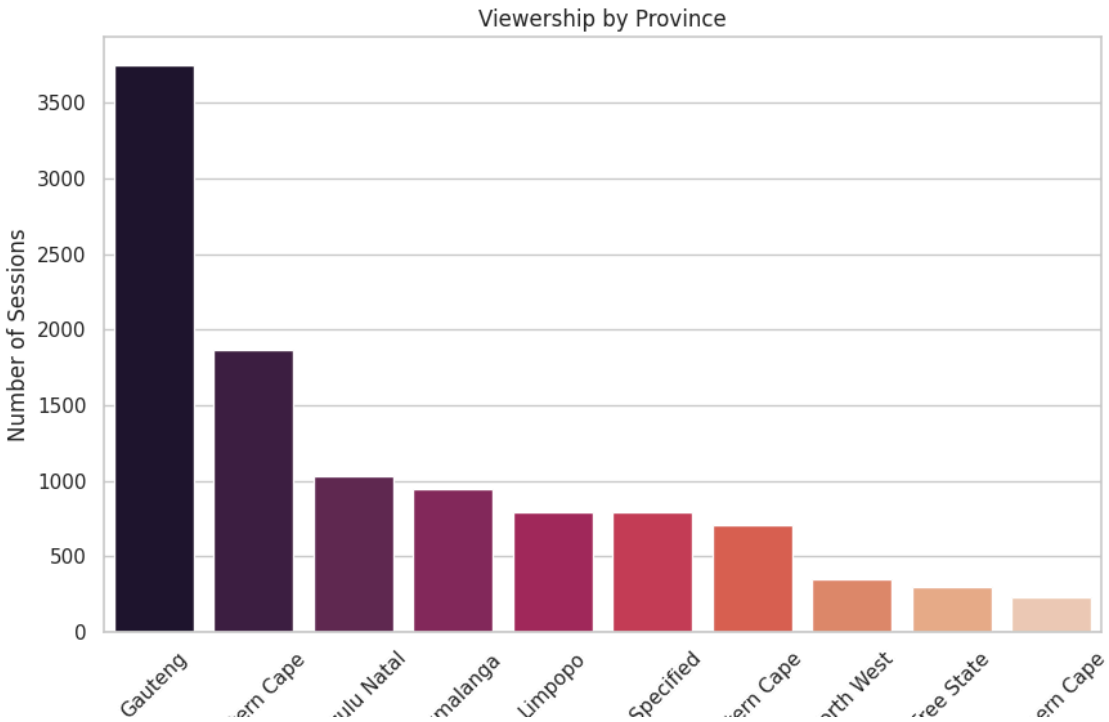


The “Young Adults” and “Youth” segments represent the largest portions of the viewing audience. This highlights the importance of content that appeals to younger demographics for sustaining and growing the subscriber base.

2. Geographic Distribution

The geographic analysis shows where BrightTV’s viewers are located across South Africa.

Viewership by Province

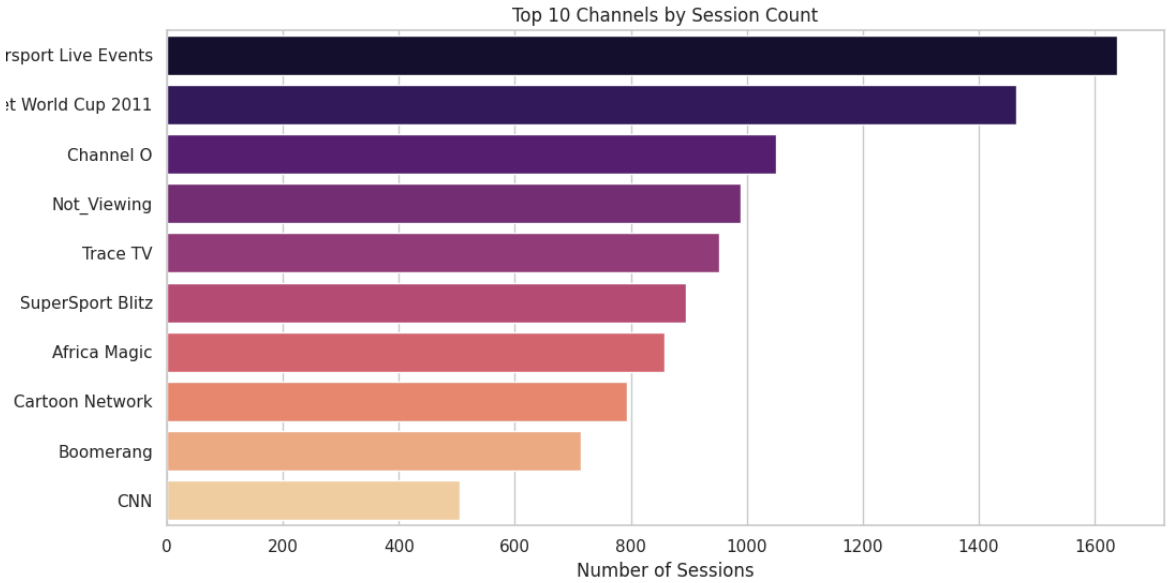


Gauteng and the Western Cape emerge as the primary hubs for viewership. Strategic growth initiatives should focus on both maintaining dominance in these regions and expanding reach in underrepresented provinces.

3. Content and Usage Trends

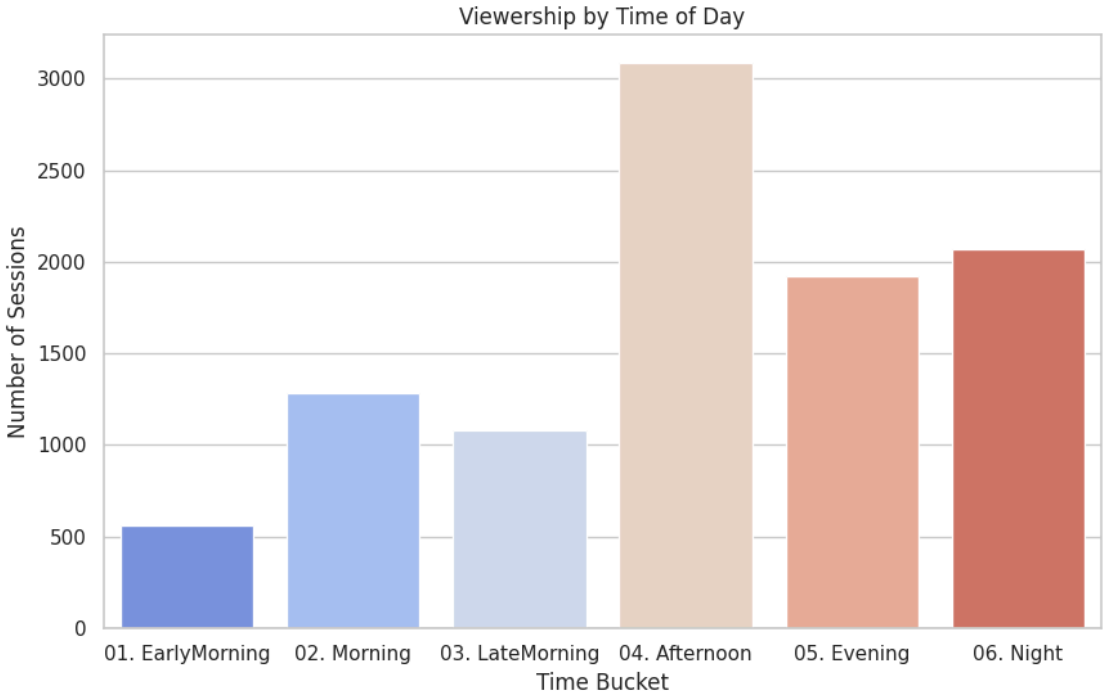
This section analyzes the most popular channels and the timing of viewership.

Top 10 Channels by Session Count



“Africa Magic,” “Trace TV,” and “SuperSport Blitz” are among the most-watched channels. These channels serve as key anchors for the BrightTV platform.

Viewership by Time of Day



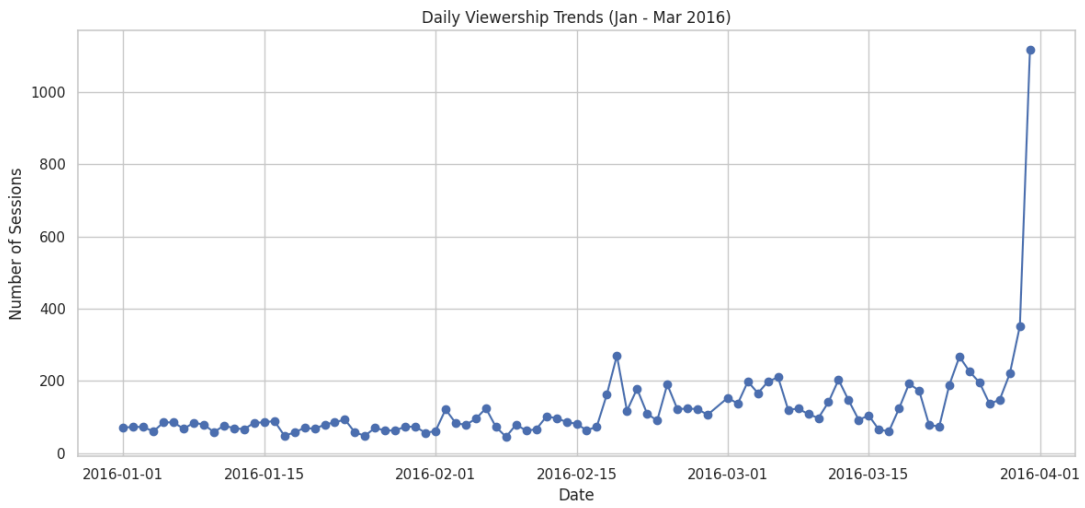
Peak viewership occurs during the “Afternoon,” “Evening,” and “Night” time buckets. Content scheduling and promotional activities should be aligned with these peak

periods to maximize engagement.

4. Viewership Trends Over Time

The daily trends provide insight into the consistency of viewership over the analyzed period.

Daily Viewership Trends (Jan - Mar 2016)



The trend analysis shows fluctuations in daily session counts, with certain periods experiencing higher engagement. Identifying the factors behind these peaks (e.g., specific events or holidays) can help replicate success in lower-viewership periods.

Conclusion and Recommendations

The dashboard insights suggest that BrightTV has a strong foothold among young adults and in key urban provinces. To drive further growth, the company should:

1. **Strengthen Youth Content**: Continue investing in content that resonates with the Young Adult and Youth demographics.
2. **Optimize Peak Time Scheduling**: Ensure high-demand content is prioritized during evening and night slots.
3. **Target Regional Expansion**: Develop localized marketing initiatives for provinces with lower viewership session counts.

4. **Leverage Anchor Channels**: Use the popularity of top channels like Africa Magic and SuperSport to promote newer or underperforming content.
