Subscriber Insights & Growth Strategy

A data-driven view of users, viewing behaviour, and opportunity

Dataset window: 2016-01-01 to 2016-03-31 • 5,375 profiles • 10,000 viewing sessions

Prepared for the Lead Data Analyst review

Agenda

- **1. Methodology** — data sources, cleaning, scope
- **2. Trends** — user base, viewership volume, time patterns
- **3. Drivers** — what is shaping consumption today
- **4. Content recommendations** — channels, audience fit, gaps
- **5. Growth initiatives** — actions to grow users & viewership
- **6. Roadmap & next steps**

Methodology

Two source tables were profiled, cleaned and joined on UserID. Durations were normalised to minutes and timestamps decomposed into month, weekday

5,375
User profiles

10,000
Viewing sessions

81.6%
Profiles that viewed (activation)

Data quality notes

- 218 profiles missing Province / Gender / Social handle — treated as **Unknown**
- Some channel names duplicated by case (Sawsee/SawSee, Supersport variants) — consolidated for analysis
- Age range includes outliers (0 and 100+) — retained but flagged for governance

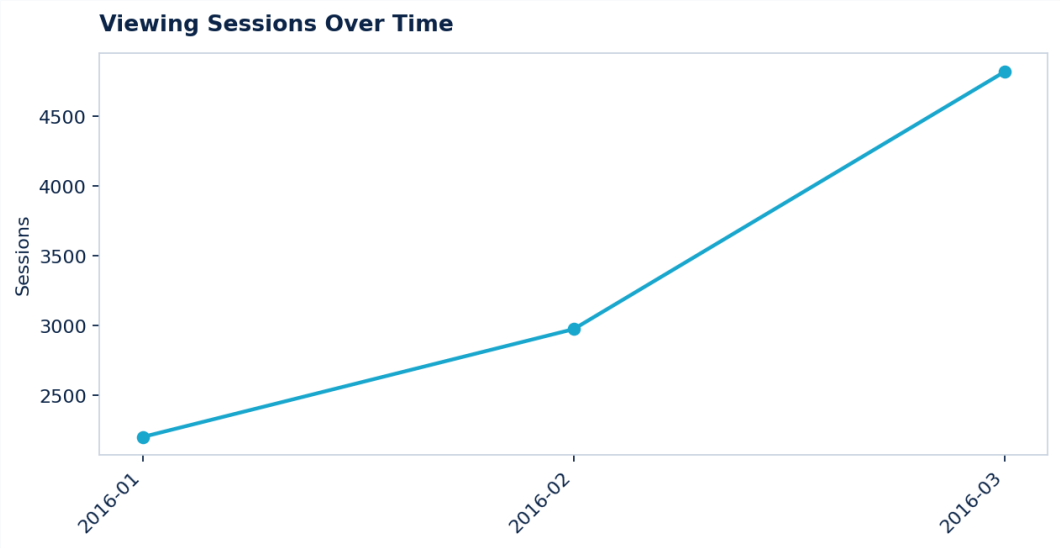
1. Trends — At a glance

5,375	4,386	9.1 min	91,380
Total registered users	Active viewers in window	Average session length	Total minutes watched

Key reads

- **81.6%** of registered profiles streamed at least once in Q1 2016 — healthy activation, but ~**18%** dormant.
- Average session is short (**9.1 min**) — suggests browsing / channel-surfing rather than deep engagement.
- Viewing concentrated in **2016-01-01** → **2016-03-31** with sport-led peaks (see trend chart).

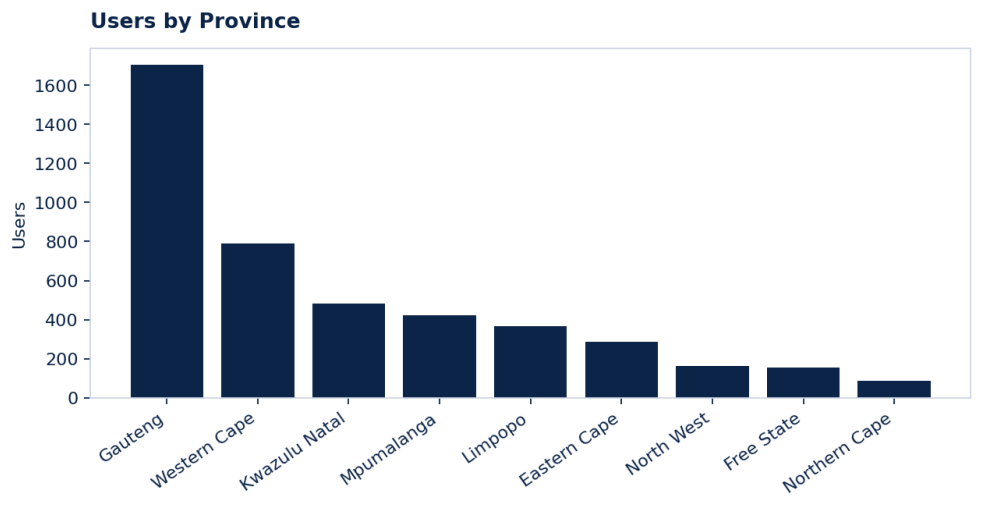
Viewership over time

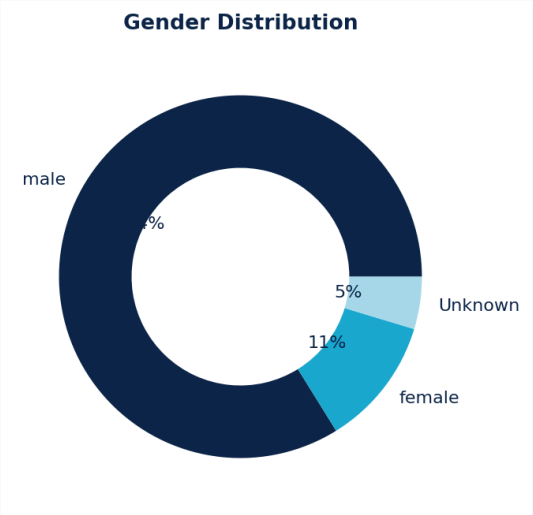


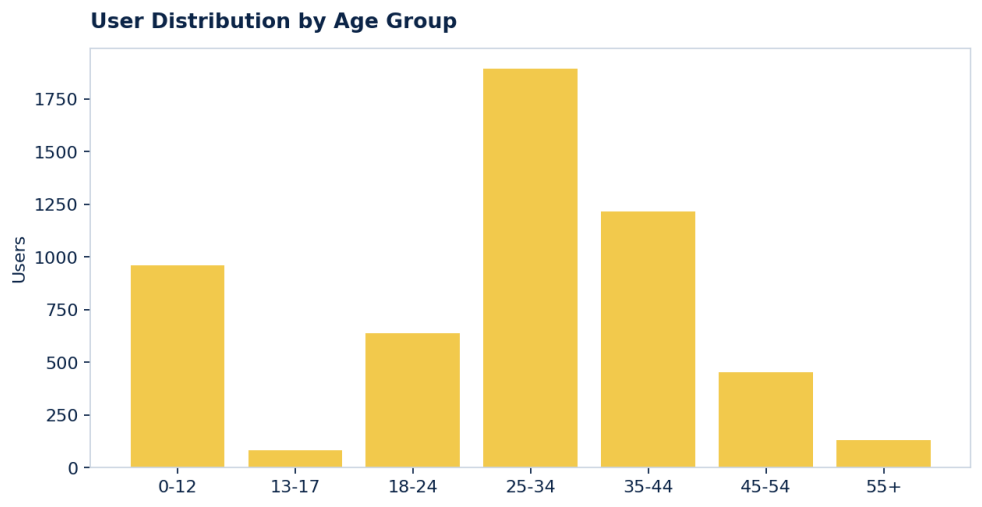
So what?

- Volume swings track live sport schedules.
- Off-peak weeks signal opportunity for original / on-demand programming to smooth demand.
- Use the calendar to plan promo flights ahead of high-affinity events.

Who is watching



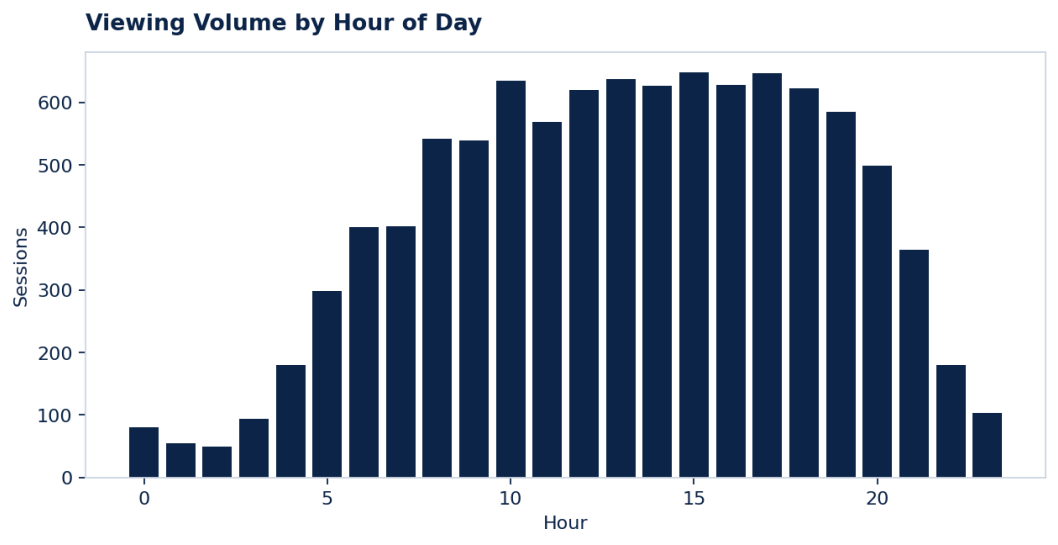




Audience snapshot

- **31.7%** of users in Gauteng — concentration risk & opportunity.
- Median age **30** — millennial-skewed base.
- Gender skew: **72.9% male / 10.0% female** — under-served female segment.
- Largest race group: black (**33.7%**) — informs content & marketing tone.

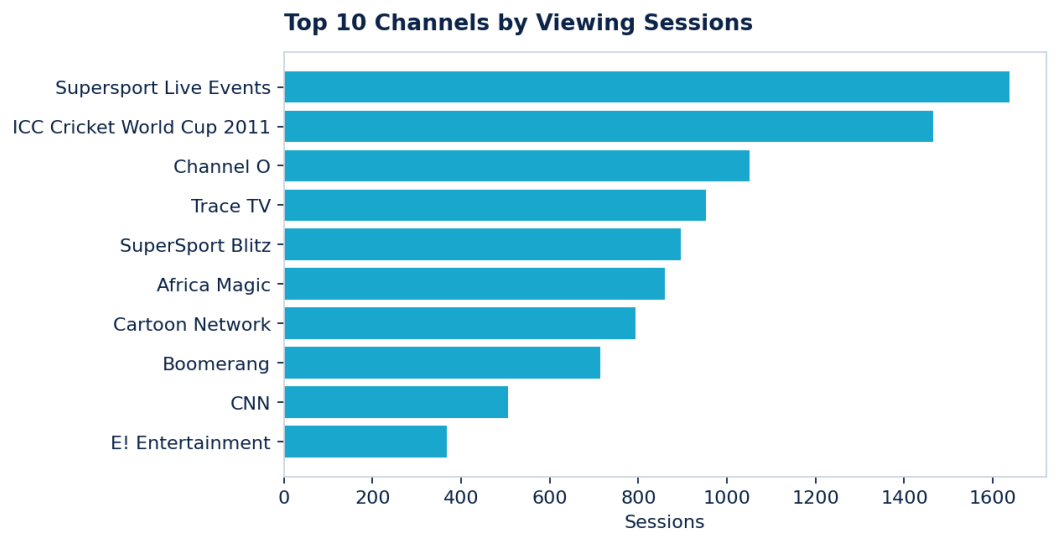
2. Drivers of consumption



What is moving the needle

- **Live sport** dominates — Supersport & ICC Cricket together drive a large share of all sessions.
- **Prime-time peaks** are clearly visible in the hour-of-day chart — supply ads & promos around these windows.
- **Geographic concentration** in Gauteng & Western Cape lifts urban-format content (news, entertainment).
- **Youth-skew** drives demand for kids (Cartoon Network, Boomerang) and music (Channel O, Trace TV).

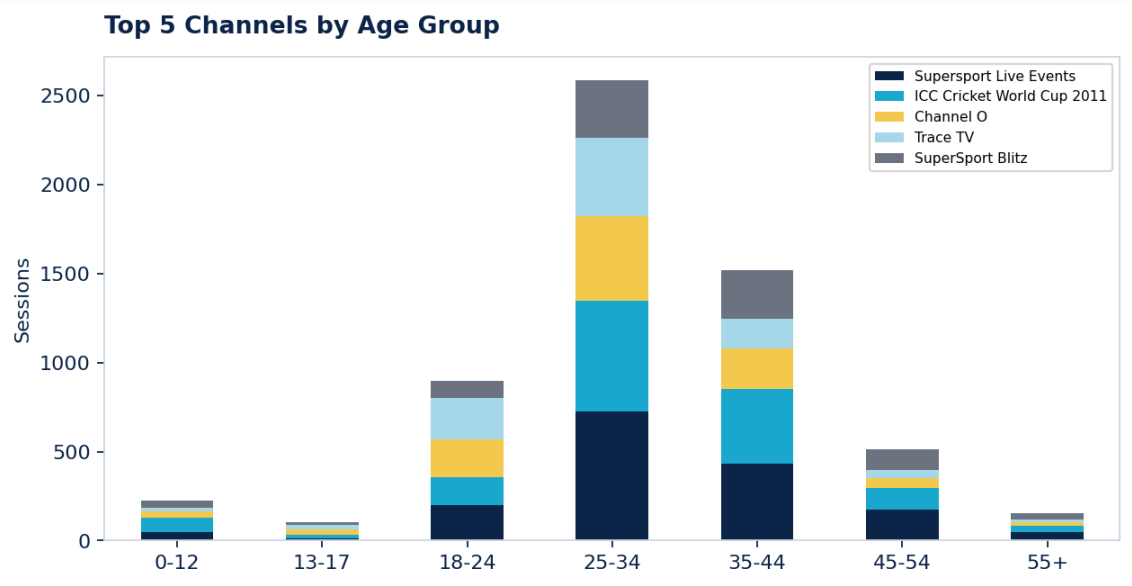
3. Channel performance



Reads

- Top channel: **Supersport Live Events** at **16.4%** of all sessions.
- Top 5 channels = sport, music & African entertainment — clear pillars for the content strategy.
- Long-tail channels (kykNET, MK, Wimbledon) under-index — candidates for promotion or rationalisation.
- Kids block (Cartoon Network + Boomerang) is a strong daypart — bundle with family plans.

Audience fit by age



Programming implications

- Sport pulls 18–44 — premium-ad inventory.
- Music channels skew 18–34 — partner with brands targeting Gen Z/Millennials.
- Cartoon/Boomerang pulls 0–17 — co-viewing with parents → family bundles.
- Older (45+) cohort under-served — opportunity for news, drama, lifestyle.

4. Content recommendations

Double-down on live sport

Lock multi-year rights for cricket, football and Supersport tentpoles. Build companion shows (pre-/post-match) and short-form highlights for social.

Grow African entertainment

Commission local drama and music for Channel O / Africa Magic audiences. Co-produce with regional studios to deepen library.

Family & kids bundle

Package Cartoon Network + Boomerang + family movies. Position as a parent-friendly tier with parental controls.

Close the female-audience gap

Female users are only 10.0% of base. Acquire or commission lifestyle, reality and drama formats; tune marketing creative & influencer mix.

Rationalise the long tail

Channels with <1% share should be either bundled, promoted with on-air sustains, or dropped from the line-up at next renewal.

5. Growth initiatives

Five plays to grow users **and** viewership in the next 2 quarters:

1. **Re-activate dormant 18%**
   ~989 registered users never streamed. Trigger win-back emails, push notifications and a 7-day premium trial.

2. **Expand outside Gauteng**
   Gauteng = 31.7% of base. Run regional acquisition campaigns in Eastern Cape, North West, Free State and Northern Cape using local-language creative.

3. **Win female viewers**
   Lift female share from 10.0% → 25% via lifestyle content, female-led hosts and marketing through women-skewed social platforms.

4. **Live-sport calendar marketing**
   Pre-promote every major fixture 7/3/1 days out via app push, SMS and social. Tie subscription offers to marquee events.

5. **Improve data hygiene**
   Make Province & Gender mandatory at signup, add validation. Enables better personalisation and ad targeting.

Targets & success metrics

+15%
Active users (next 6 months)

+25%
Total minutes watched

12 min
Avg session (from 9.1)

25%
Female share of base

How we will measure

- Weekly cohort retention curves by signup month and province
- Channel-level minutes per active user (MPAU) — content efficiency
- Re-activation funnel: dormant → email opened → app opened → first session
- Acquisition CPA and LTV by region & gender for the new campaigns

6. Roadmap

0–30 DAYS

Quick wins

- Re-activation email & push campaign
- Data-quality audit & form fixes
- Sport-fixture marketing calendar live

30–90 DAYS

Build

- Family bundle launch
- Female-audience content slate commissioned
- Regional acquisition campaigns

90–180 DAYS

Scale

- Original African entertainment drops
- Long-tail channel rationalisation
- Personalisation engine v1

Thank you

Questions, challenges and next-step decisions welcome.
